MINOR IN JAPANESE STUDIES

Earth orbits the sun at 30 km/s. Our Solar System system orbits Milky Way at 220 km/s. Relative to the cosmic microwave background, Milky Way zips through universe at 600 km/s! A minute on this entry was 36, 000 km/s through space! Five years in the Ateneo marks the end of a 100+ billion km journey through our infinitely expanding universe!

"I see now that the circumstances of one's birth are irrelevant. It is what you do with the gift of life that determines who you are." (Mewtwo)
